# C&D Lumber Co.

*Great People. Great Products. Great Customers.*

When C&D Lumber Co. filled its first order in 1890, the timber was harvested using hand tools and transported off the mountain using horses and the currents of Oregon rivers. It was milled using steam power, and loaded into the backs of wagons, bound for booming Northwestern towns.

Today, we count on skilled harvesters who comply with strict environmental guidelines. We make use of fleets of semi-trucks and railcars to get our carefully milled products to distributors and job sites across the United States and beyond.

At the mill, our computerized state-of-the-art technology exceeds anything our founder Alfred Johnson could have imagined. In fact, even though C&D is relatively small, we have the largest lumber grade scanner and bin sorter system in the United States.

Still, we carry on the traditions of old-world craftsmanship, respect for natural resources, a love for cedar, and the strong work ethic that has been our approach since the Johnson family founded the business.

Today the sixth generation of the family actively guides the company in its successful navigation of a complicated national and international market. We stand out from the crowd because we offer more than a commodity: our customers return to us over and over again, citing our attention to promptness, accuracy and service. Our employees stay with us for years, appreciating our focus on safety and that we deeply value their work.

As much as we'd like to become accustomed to the compliments, we don't. We believe there is always room for improvement, and that we can repay the praise through that effort. If you are a current C&D Lumber customer, we are grateful for your loyalty, and your business. If you are new, or considering us for the first time, call us. This booklet offers an overview of what we do and we are happy to help connect your needs with our offerings.

## Our Success Depends on Healthy Forests *and Your Customers Demand the Same*

At C&D Lumber, we do everything in our power to sustain the health of our natural resources as we produce our top-quality wood products.

We buy our timber from foresters who practice scientifically sound and efficient forest management techniques that provide habitat for wildlife and aquatic life, and maintain forest tree species, soil, air and water resources.

These practices ensure the continuous growth and harvesting of forest trees for the benefit of future generations of Oregonians, and for our mill.

We believe that the future of forestry and milling depends on voluntary compliance with strict regulations.

### **Oregon Forest Practices Act**

To those ends, we have always committed to comply with the rigorous Oregon Forest Practices Act and the regulations established and enforced by the Oregon Department of Forestry.

We do this regardless of whether we harvest the timber, or we buy from someone else. When purchasing logs, we require a Notification of Operations Number to assure harvesting and

reforestation is in compliance with the Oregon Department of Forestry, and Oregon Forest Practices Act.

### **Quality Endures**

Yet our commitment to sustainability goes farther: By providing high-quality materials, we help build higher quality projects that last longer, and endure more.

### **No Wood Goes to Waste**

Of course, we have a responsibility to be as efficient as possible with our logs. To do this, we utilize every part of the log, leaving no waste. The bark removed from a log is used for landscaping bark or mulch, the wood chips are used to make paper products, and the sawdust and planer shavings are sold to make pressed board products.

DOUGLAS FIR

# Douglas Fir

## *Stable, Strong and Sustainable*

Douglas Fir is our flagship species. It's a classic Northwest offering, in good part because of the balance it strikes between strength, beauty and affordability. We've depended on Doug Fir for more than a century, and with careful management and adherence to the guidelines set by the Oregon Forest Practices Act, we'll be milling it for years to come.

C&D is known nationwide for the rough and surfaced Doug Fir products we offer, and it's a reputation that's based on hard work and attention to detail. From our dimensional lumber for framing, to custom-milled beams for open construction, C&D is the go-to for well-priced, quality materials for architects and builders.

### More reasons you'll love our Doug Fir:

- Basic projects benefit from the affordability of our offerings.
- Our Premium Exposed® line allows you to select the very finest Doug Fir available.
- All products are precision milled and graded by certified graders who follow WWPA standards.
- We have long-term relationships with our buyers, thanks to competitive pricing and an emphasis on service from sales through shipping.
- We offer a full line of surfaced products in a variety of grades. Plus, a wide range of sizes in rough industrial grade timbers.

DOUGLAS FIR

# Douglas Fir Premium Exposed<sup>®</sup> Products

*When Appearance Matters*

With natural beauty and exceptional strength, our Premium Exposed<sup>®</sup> rough sawn timbers and 2" lumber have become the preferred lumber for open-beamed construction.

By starting with pre-selected raw materials and manufacturing beams with precision milling, C&D sets a standard your customers will appreciate.

We take extra steps to ensure our products are worthy of any project and the tree the timbers came from: All Premium Exposed<sup>®</sup> products are graded on an in-house grade rule which

exceeds WWPA's standards for pitch, shake, and wane. All our products are anti-stain treated and paper-wrapped, guaranteeing superior quality and a clean, blemish-free appearance.

We are proud to meet your unique needs, because we believe that when you specify C&D Douglas Fir, you are committing your project to the highest levels of craftsmanship and beauty. Our goal is to help make each project a success.

# Incense Cedar

## Top Marks for Performance, Aesthetics

Incense Cedar is both beauty and beast. Its warm tones and even grain lend any project extra points for presentation, but it's beyond brawny. In fact, it surpasses even Western Red Cedar in six of ten important areas, including crushing strength, tensile strength, bending strength and impact bending.\*

Incense Cedar, which has sometimes been marketed as Western Cedar, is highly rated for natural durability, stability, shrinkage, checking, weathering, warping, insulation value and workability. It's a great choice for decking, siding and outdoor projects too.

Its natural beauty is instantly recognizable to West Coasters, who prize its endurance in extreme temperatures and harsh conditions. A uniform texture and tight-knot, high-line, appearance grade and natural light color are sure to help keep demand high.

\*Source: Wood Handbook: Wood as an Engineering Material; U.S. Dept. of Agriculture, Forest Service; Table 4-2

### More reasons you'll love our Incense Cedar:

- We offer a wide range of complementary products, including exposed timbers, dimensional lumber, decking and pecky landscape timbers.
- Those who want wood without the maintenance will appreciate Incense Cedar's natural oils, making it possible to forego stains or oils.
- High insulation value makes it a very good choice for projects with exposed beams and ceilings.

# Port Orford Cedar

## *The Strongest of All Cedars Has a Soft Side*

Port Orford Cedar has long had a reputation for its durability. It compares to Redwood and Western Red Cedar for life expectancy but handily outperforms in strength categories. And unlike its comparators, Port Orford Cedar offers an under-stated soft luster, plus a smooth, no-sliver finish.

Thanks to C&D's 16-knife planer, it really can't be beat for livability. Today's homeowners and designers will find it compatible with any project style, and builders will find it extremely workable.

### **More reasons you'll love our Port Orford Cedar:**

- We kiln dry our Port Orford Cedar to an average moisture content of 15%.
- Port Orford is 45% stronger than Redwood or Western Red Cedar in "Impact Bending".
- In "Crushing Strength," Port Orford is 30% stronger than Redwood or Western Red Cedar.
- Port Orford has excellent oil-based stain-holding properties.
- Left unstained, its soft white hue naturally ages to a silver gray.

# Port Orford Cedar

## PRODUCT MENU

**Port Orford Cedar GR Rough** Appearance, #2&Btr, Std&Btr

**2" x 4" - 2" x 8"** R/L 8' - 20'
